

SPECIFICATION AMENDMENTS

Please amend the following paragraph as indicated. The paragraph appears on p. 53 of the specification at lines 9-18:

Referring to **FIGS. 8 and 10**, one embodiment of the system and method for implementing the present invention is summarized in a flow chart (**FIG. 8**) and basic system drawing (**FIG. 910**). **FIG. 8** is presented to explain the basic steps in the method of implementation of the present invention that allow a user to access and process the large amounts of data necessary, using minimal RAM memory and disc space on a computer. Multiple modes of implementation of the present invention are, of course, possible. As depicted in **FIGS. 8 and 10**, the system is a client-server system, where the user's computer **3000** is on the client side and the server **3010** may be located elsewhere on an Intranet or Internet. The same basic methodology could, however, be employed on a single computer with sufficient memory and disc space to store the databases and run the programs.
